Gold Prices Slip As Investors await U.S. CPI Data

- Gold prices were slightly lower on Tuesday, as investors look ahead to U.S. inflation data later in the day for clues on inflation and how fast the U.S. Federal Reserve might raise rates.
- US inflation expectations grew higher last month, as a survey by Federal Reserve Bank of New York revealed an inflation measure hit its highest level in a year, adding to signs of price pressures.
- Gold slipped to its lowest in a week on Friday after the payrolls report, having come under pressure earlier in the week after failing to break through the \$1,340 an ounce level for a second time in two weeks.
- Gold is sensitive to moves in both U.S. rates and the dollar. A stronger dollar makes gold more expensive for holders of foreign currency, while a rise in U.S. rates lifts the opportunity cost of holding non-yielding assets such as bullion.

Oil prices dip on relentless rise in U.S. crude output

- Crude oil prices moved lower on Tuesday, following news of another increase in U.S. production and as investors awaited this week's U.S. supply reports.
- Oil prices came under pressure after the International Energy Agency (IEA) said in its monthly report on Monday that U.S. crude oil production jumped above 10 million barrels per day (bpd) at the end of 2017, overtaking output by top exporter Saudi Arabia.
- The IEA also said that U.S. production is expected to rise above 11 million bpd by late 2018, outpacing Russia.
- Separately, the U.S. Energy Information Administration (EIA) said that U.S. shale production is expected to rise by 131,000 bpd in April from the previous month to a record 6.95 million bpd. That would top the 105,000 bpd climb in March to what was then expected to be a record high of 6.82 million bpd.
- The EIA is due to publish its weekly U.S. stockpiles data on Wednesday, while the American Petroleum Institute's will release its report later Tuesday.
- Fears that rising U.S. output could dampen global efforts to rid the market of excess supplies persist.

GBP/USD slipping as markets hunker down ahead of the US inflation risk event

- The GBP/USD is shaking out in Asia trading, declining from a session high of 1.3912 to trade into the 1.3880 region ahead of European markets. Markets are beginning to go squirrely as the US CPI data looks set to kick off the trading week officially after sedentary market conditions in Monday's session.
- The Sterling is declining into Tuesday's macro data window, with the UK's Budget Report dropping at 11:30 GMT, quickly followed by the US CPI figures at 12:30.
- The Budget Report will provide markets with updated GDP and economic activity forecasts for the fiscal year heading into Brexit. Ongoing Brexit concerns have been a drag on the GBP lately, but with the possibility of an EU-UK deal being announced at the end of the month, traders and UK business operators alike are hopeful that Brexit, which begins next March, won't be as much of an opaque mess as it has seemed recently.
- Markets are hunkering down in anticipation of the US inflation figures; inflation fears were temporarily sated last Friday when the jobs report that added 313k new jobs to the American workforce also showed slack in real wage growth, implying that inflation may not be surging as much as many have expected.

USD/JPY bulls eyeing a move beyond 107.00 mark, US inflation holds the key

- The USD/JPY pair built on its strong rebound from an intraday low level of 106.25 and might now be eyeing a move beyond the 107.00 handle.
- In absence of any fresh development, the pair's sharp up-move of nearly 75-pips from the Asian session lows could be attributed to a goodish pickup in the US Dollar demand. With investors looking past Friday's sluggish US wage growth data, a modest uptick in the US Treasury bond yields underpinned the USD and was seen driving the pair higher.
- Adding to this, a mildly positive trading sentiment around equity market was seen weighing on the Japanese Yen's safe-haven appeal and further collaborated to the pair's strong up-move, back closer to the post-NFP swing highs.

Gold price finds solid resistance at the EMA50 which is located at 1325.00, which pushes the price to provide negative trades now, and it might show new test to 1316.48 level before resuming the positive attempts. Until now, the bullish trend scenario still valid for the upcoming period unless breaking 1316.48 level and holding below it, as breaking it will push the price to visit 1301.20 areas before any new attempt to rise, while the expected bullish wave targets begin at 1335.40 followed by 1348.00 on the near term basis.

Silver price shows sideways and tight trading, keeping its stability above the key support 16.30, thus, no change to our bullish overview that depends on the stability above the mentioned support, supported by stochastic approach to the oversold areas again, noting that breaching 16.65 will ease the mission of heading towards our next main target at 17.43.

Crude oil price confirmed breaking 61.40 level after closing the daily candlestick below it, which activates the bearish trend scenario on the intraday basis, targeting testing 60.14 level again, noting that breaking this level will extend Oil price losses to reach 58.60 as a next station. Therefore, the bearish trend will be expected for today supported by the negative pressure formed by the EMA50, noting that breaching 61.40 will stop the suggested decline and lead the price to achieve gains on the intraday and short term basis.

Brent oil price faced strong negative pressure yesterday to break 65.40 level and settles below it, which stops the recently suggested positive scenario, especially that the price moves below the EMA50, but we notice that stochastic provides clear positive signals that might assist to push the price to recover the losses that it suffered in the previous sessions. Therefore, this contradiction between the technical factors makes us prefer staying aside until we get clearer signal for the next trend, noting that breaking 64.00 will confirm the continuation of the bearish wave to target 61.71 areas on the near term basis, while breaching 65.40 will lead the price to attempt to regain the bullish trend that its main targets begin at 66.54 and extend to 67.68.

Copper price succeeded to gain new momentum yesterday, due to stochastic rally above 50 level, reinforcing the continuation of the bullish bias domination, and the stability of the main support at 3.0500 forms the main factor for the continuation of the positivity, targeting 3.2000 level in the near period reaching to the top at 3.3200. We should mention that the price attempt to reach below the main support and providing negative close below this level will cancel the positive overview, to begin targeting several levels that begin at 2.9500.

Platinum price remains stable above the critical support at 940.00 level, to notice its affection by the sideways bias due to the neediness to the bullish momentum, therefore, we will keep waiting until gathering new positive momentum to push it to surpass 985.00 barrier, then begins recording more of the positive targets that begin at 1030.00. Note that the price attempt to break the current support will cancel the positive overview, affected by big negative pressures, to expect targeting several negative levels that might begin at 890.00.

Cotton price lost its momentum around 85.50 and fell to test its major support at 83.70. Currently price is hovering around 83.70. Breach of 83.70 and stability below this level may trigger further correction towards 81.75 and 80.60. Whereas breakout of 84.90 will be a bullish sign and the resumption of the wave to target 86.56. Therefore trend is neutral at the moment on intraday basis.

The GBPUSD pair tests the correctional bearish channel's resistance that declines now to 1.3915, forming key level to determine the next trend, as breaching it will push the price to resume the main bullish trend that its next target located at 1.4344. On the other hand, the stability of the mentioned resistance and falling sharply breaking 1.3817 will push the price to extend its bearish correction and head towards 1.3490 direct. Therefore, we will continue with our neutrality until the price confirms surpassing one of the above mentioned key levels.

The USDJPY pair resumes its positive trading by today's opening after retesting 106.35 level successfully, which keeps the bullish trend scenario valid and active in the upcoming sessions, supported by the positive signal provided by stochastic, reminding you that our next target is located at 107.40. Breaching the targeted level will extend the bullish wave to reach 08.54, while breaking 106.35 will stop the expected rise and push the price to decline again.

The AUDUSD pair resumed its positive trading to approach our first waited target at 0.7893, which keeps our bullish overview active until now, noting that the EMA50 provides positive support to the price to reinforce the chances of breaching the mentioned level followed by extending the bullish wave towards 0.7986. Therefore, we will continue to suggest the bullish trend in the upcoming sessions unless breaking 0.7818 level and holding with a daily close below it.

USDCHF & USDCAD

MARKET SUMMARY				
Date	OPEN	HIGH	LOW	CLOSE
12-Mar-18	0.9514	0.9514	0.9458	0.9474

RANGE	0.9250-0.9650			

The USDCHF pair retests 0.9488 level that was breached previously and keeps its stability above it until now, noticing that stochastic begins to overlap positively on the four hours' time frame, which forms positive factor that we are waiting to motivate the price to resume the bullish trend in the upcoming sessions, noting that our waited targets begin at 0.9581 and extend to 0.9675. On the other hand, we should note that breaking 0.9430 will stop the expected rise and push the price to test 0.9373 areas initially.

MARKET SUMMARY

RANGE	1.2700-1.3100			

The USDCAD pair shows some slight bullish bias to approach testing the EMA50, noticing that stochastic loses its bullish momentum clearly to enter the overbought areas, forming negative factor that we are waiting to motivate the price to rebound bearishly in the upcoming sessions. Therefore, we will keep our bearish overview on the intraday basis, reminding you that our waited target is located at 1.2717, while the expected decline will remain valid unless breaching 1.2923 level and holding above it.
